Quest 4: Payments API Guide.

First Step: Installing Circle's Sample Web Application

* check if git is installed on your machine, run the following command on you terminal:

        $ git -v

git -v will the git version on your machine else head to
https://github.com/git-guides/install-git **and install-git**

* check to make sure node is installed on your machine, on the terminal run:

          $ node -v

if a version is returned then node is installed on your machine else use https://nodejs.org/en/ to install node

=> since the project repository we will work with was set up with yarn, we need will use yarn as our node.js package manager

* run the following command on your terminal:

        $ yarn —version

if it does not return a version number, run the below command on the terminal to install yarn:

        $ npm install --global yarn

Next run the command below to clone the working repo.

$ git clone https://github.com/circlefin/payments-sample-app.git
